Fuse plug, 2004 Series, gray

This fuse plug (item number 2004-911) simplifies electrical installations. The gray housing is made of polyamide (PA66) for insulation.

Electrical data

Power Loss		General information	
make su	When selecting glass cartridge fuses, make sure that the maximum power loss	Fuse type	Cylindrical fuse; 5 x 20 mm and 5 x 25 mm
	listed below is not exceeded. The power loss is determined according to IEC or EN 60947-7-3/VDE 0611-6 at 23°C. The temperature rise of the terminal block must be checked according to their application and mounting. Higher ambient temperatures represent an additional impact on miniature fuses. Therefore, in such applications, the rated current must		

be reduced if necessary. More details are available from the manufacturers.

## **Installation Notes**

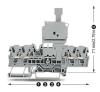

https://www.wago.com/2004-911

Using fuse plugs with rail-mount terminal blocks for control circuit protection is highly advantageous because the function and wiring levels are separated:

- No additional cost for assembly and wiring
- No risk of accidental contact with live parts when disconnecting the fuse plug
- The fuse plug is completely separated from the carrier terminal block when replacing a fuse – away from current carrying parts
- The fuse plug can be removed by service personnel
- No unintentional reclosing of the circuit by another person
- Quickly exchange a fuse by using a prepared "stand-by plug"
   Fuse plug features for quick and safe applications:
- Optional LED indicates blown fuse.
- Top-of-unit marking slot provides clear carrier terminal block identification.
- Two test slots with touch contacts
- Terminal blocks/plugs provide high-density wiring in a width of just 5.2/6.1 mm.
- May be used as a disconnect plug in combination with a shorting link.

## Fuse plug dimensions:

66.1 mm / 2.62 inch for 2002-1661 76.8 mm / 3.02 inch for 2002-1761 87.5 mm / 3.45 inch for 2002-1861 72.9 mm / 2.87 inch for 2002-1961 with inserted fuse plug

#### Upen side of terminal bi

Please note:
The extra width of the plug (6.1 mm compared to 5.2 mm for carrier terminal blocks) must be compensated for with intermediate plates (1 mm) when building an assembly of carrier terminal blocks equipped with fuse plugs.
